

Flameo ZSA members,

My advisor used to tell me stories about the old days, a time of peace when ZSA kept balance between the marine bio, animal behavior, genetics, and zoo and aquarium science majors. But that all changed when the genetics majors attacked. Only ZSA master of all four (actually 6) concentrations could stop them. But when the world needed ZSA the most we went online. A hundred years (aka the year 2020) have passed and the e-board discovered ZSA online. Although its social distancing skills are great ZSA has a lot to learn (about being online) before ZSA is ready to save any concentration. But I believe ZSA can save the world.

Our animal of the week is the Monito del monte. It is the only extant species in the order Microbiotheria. They are able to survive poisonous snake bites and have better immune systems than humans. They are thought to be bad luck and if one enters your house you need to burn your house down faster than the fire nation burned down all the air nomads so you can restore your honor.

Now is a great time to join AZA and get connected with zoos all over the world. KBS summer courses, research, and internship applications are now being open and will be accepted on a rolling basis until April 1st.

Tonight we listened to a talk given by Lindsey Brendel, an interpreter for the national parks service! Don't miss our meeting next week for some fun games and prizes.

Annica's Joke corner:

ZSA Yip Yip,

ZSA E-board
