

General Meeting

2/16/21

Animal of the Week: Monito del monte (*Dromiciops gliroides*)

- It is the only extant species in the order Microbiotheria
- They make sounds, their calls often sound like coughing and buzzing
- They were present when dinosaurs were alive (considered a living fossil)
- They are able to survive poisonous snake bites, and have better immune systems than humans
- It is thought to be bad luck if one enters your house and the only way to reverse it is to burn down your house
